Rinnai®

TANKLESS WATER HEATERS

about us

As the leading manufacturer of home gas appliances in the world, Rinnai offers a product line that includes an extensive range of residential appliances for efficiently heating water and air. Our flagship product is the award-winning, continuous flow tankless water heater, that's viewed number one by homeowners across the nation.

As Reliable As Our Products

With more than 6,700 employees based in more than 100 locations worldwide, you'll receive all the product support and service you demand. You can be assured that you'll have the availability of the Rinnai products you want through our network of North America's most recognized appliance distributors. We've trained and registered more than 20,000 independent technicians across the nation to provide quality Rinnai installations for years of trouble-free operation.

Key Features and Benefits of Rinnai Tankless Water Heaters

Rinnai's Tankless Water Heater flaunts a sleek, modern design and comes with a commercial-grade heat exchanger for residential and commercial applications. All models are ENERGY STAR® qualified.

Rinnai is a proud affiliate with these industry leaders.

Rinnai®

TANKLESS WATER HEATERS

features & benefits

Why Rinnai Tankless

Rinnai Tankless Water Heaters use natural gas or propane gas to heat water only when needed. When water flow is detected, the Rinnai begins heating water as it passes through its copper heat exchanger. The design of the unit allows it to capture up to 84 percent of the heat energy, making it highly efficient and cost-effective.

When the demand for water ceases, the tankless unit shuts down and uses no electricity – a major advantage over traditional tank-style water heaters.

Contemporary Design

Rinnai's sleek, modern water heater design reflects the innovative technology within. With their attractive silver finish, LS Series interior-mount units can be placed in any room – no need to hide them in closets or utility rooms – and vent directly to the outside.

Rinnai®

TANKLESS WATER HEATERS

features & benefits

Digital Temperature Control

Rinnai's digital controllers allow the homeowner to set water temperature precisely for multiple locations in the home. The MC-91 controller is integrated on the front panel of the LS interior unit.

Saves Space

Traditional tank water heaters can take up to 16 square feet of valuable floor space. But, the Rinnai unit – only about the size of a carry-on suitcase – can be installed on virtually any wall inside of the home.

Improved Performance and Longevity

Whichever LS unit you choose, you get the benefit of a commercial-grade heat exchanger for optimum durability. In fact, the same LS unit can be used for both residential and commercial applications. Homeowners get the reliability of commercial-grade construction and an industry-leading, 12-year limited warranty.
